I wanted to write and thank you for making this film. I'm an asymptomatic HIV positive person of 18 years. Against the strong advice of doctors and well meaning friends and family, I made a decision from the start not to take toxic HIV meds. It never made sense to me that a disease of immunosuppression should be treated with immunosuppressive drugs! I decided that if I was going to die I wanted to die "naturally". I was prepared to take on each symptom as it appeared and deal with it as best I could. Well guess what ... in 18 years no symptoms have ever appeared!!!! I used to think I was one of the lucky ones who had some special resistance to HIV. Now I have come to believe that I'm only lucky that I made a decision not to succumb to the overwhelming pressure to be sucked into the toxic often lethal HIV cocktail madness. My research and reading over the years combined with my own personal experience has lead me to question strongly the veracity of the HIV = AIDS hypothesis. I was shocked to learn that many scientists all over the world have questions as well. It is my strongest wish and my deepest hope that the truth about HIV will soon be uncovered. My own personal experience has convinced me that HIV orthodoxy today has it wrong. I plan to share this film with as many people as I can.

We encourage you to send us respectful, thoughtful, and thought-provoking comments/personal testimony to be considered for posting on our website. Submit to: feedback@houseofnumbers.com
